

## For the preservation of the originality of your products

### AWH butterfly valves with seals in internationally certified quality

Our contribution to meeting the highest demands in the food industry with regard to product and consumer safety.

The ingredients of our seals behave completely neutrally in contact with your products and have no negative impact on appearance, taste and quality. An entry of individual seal ingredients into your product can be ruled out if used properly. We ensure this with the conformity of our AWH butterfly valve seals to the Food Regulation 1935/2004/EC, BfR, UBA White List 12/2019 and FDA 21 CFR 177.2600 (conformity may vary depending on the material).

The biocompatibility of our AWH butterfly valve seals according to USP Class VI further offers you maximum safety on compatibility in the human organism. This type of approval, originally from the pharmaceutical and medical technology sectors, gives you and us additional security with regard to the quality and reliability of our AWH products.

In this way, we ensure that the highest quality is maintained in the manufacture of your products. Our declared goal is to follow this principle and thus contribute to a high-quality and healthy end product.
