

Together for nature and environment with TA-Luft certified AWH butterfly valves and connections

According to the precautionary principle, we are all obliged to avoid harmful effects on the environment and to do everything possible to prevent pollution and damage to the environment. This is regulated in a technical instruction, also called TA-Luft. This is a central administrative regulation for the application of the Immission Control Act, which must be complied with.

Selected AWH valves and connections have been tested by an independent institute in accordance with DIN EN ISO 15848 and fully comply with the requirements of TA-Luft. Make sure already in your planning that only TA-Luft compliant components are used in your plants. The declared aim of Armaturenwerk Hötensleben GmbH is to follow this principle and thus contribute to more environmental protection in your company.

Talk to us! We will be happy to advise you.

* Only applies to complete connections purchased from AWH, including the gasket.
